Floor And Surface Seal Renewal And Protection

Surface Renewal

As stone paving has increased in popularity over recent years, so has the need to maintain and protect it.

Untreated exterior paving and driveways; particularly porous surfaces such as sandstone and limestone can quickly stain from the effects of dirt, oils and tannins; becoming dangerous when moulds and algae take hold.

Moulds are not only unsightly and dangerous underfoot but present even greater health risks. Left untreated harmful mould and spores can be walked into your home or business putting your family and employees at risk!

The utilization of high pressure water cleaners will eradicate most moulds, dirt and stains from hard surfaces.

The Noble Earth Technologies team are proficient in multi surface cleaning service using high pressure water cleaners providing the highest quality service while ensuring the integrity of the surfaces.

Surface Sealer

The Noble Earth cleaning process significantly transforms and renews hard surfaces.

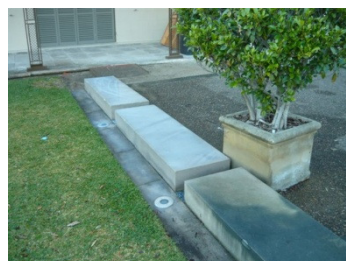

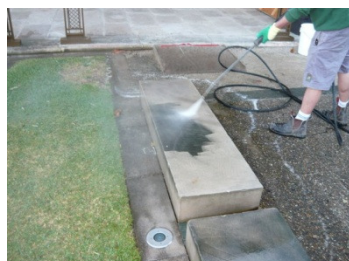

But this is only half of the job. Unless the surface is protected; the mould dirt and stains will return!

Once the surface has been renewed, the Noble Earth team will treat it with **Invisible Surface Guard**; a specialized surface seal ideal for use on most hard surfaces that will not change its appearance.

The advanced chemical formula of this CSIRO approved water based surface seal reacts with the silica capillaries of the substrate actually allowing the treated surface to breath.

Invisible Surface Guard acts as a hard surface stain repellent that makes the stone hydrophobic: repelling liquids. This provides effective protection against the ingress of wine, oil, food stuffs, stains and any build up of mould and algae while also preventing efflorescence, also known as surface salt blooming .

Stone surfaces can often be damaged over time by repeated high pressure cleaning. **Invisible Surface Guard** will not be effected by wear regardless of the traffic; protecting your surface for up to 10 years!

Floor And Surface Seal Renewal And Protection

What Invisible Surface Guard Protects

Invisible Surface Guard; available exclusively from Noble Earth Technologies can be used on masonry surfaces, brick, concrete, sandstone and most hard surfaces and is suitable for walkways, walls, floors, decks, driveways, shopping malls and most public areas.

Why Invisible Surface Guard Floor And Surface Seal

- Prevents the build up and contamination of pollutants, dirt and mould and is easy to clean while allowing treated surfaces to breathe.
- Is water based with no hazardous fumes and lasts for up to 10 years.
- Prevents surface salt blooming.
- Surfaces will not discolour or yellow with age ensuring the natural colours of your stonework.
- Prevents the adhesion of chewing gum and allows the ready removal of foodstuffs deposited on the surface.
- Even under the heaviest of foot traffic, **Invisible Surface Guard** will not wear off.
- Will not effect non-slip characteristics of the surface.
