Invisible Surface Guard

CAUTION – POISON
KEEP OUT OF REACH OF CHILDREN
CONTAINS

Noble Earth Technologies 'Invisible Surface Guard' is not a coating, but rather a formulation that chemically reacts with the silica capillaries of the substrate and becomes an integral part of the substrate it is protecting. Noble Earth Technologies 'Invisible Surface Guard' is ideal for stone, brick and masonry surfaces, such as concrete and tiles. It is also suitable for bridge pylons, walkways, paths, floors and areas where dirt, food stuffs, bill posters and general soiling have become a menace.

Noble Earth Technologies 'Invisible Surface Guard' protects the surfaces from staining and soiling. It also allows for the easy removal of chewing gum from any surface that has been treated. Noble Earth Technologies 'Invisible Surface Guard' is a unique product, as it allows the substrate to breath, yet prevents the leaching of salts from behind the treated surfaces. As Noble Earth Technologies 'Invisible Surface Guard' is not a coating, it does not detract from the non-slip properties of surfaces or alter the natural appearance of the treated surface.

DIRECTIONS FOR USE: Clean the surface thoroughly with a Noble Earth Technologies degreaser (please see your Noble Earth Technologies representative for advice) and/or an acidic wash, such as Noble Earth Technologies 'Stone and Concrete Wash' if necessary. Apply Noble Earth Technologies 'Invisible Surface Guard' to the surface by roller, brush or low pressure sprayer. We recommend spraying. Two passes are required and the second application should be done while the first application is wet. Avoid windy conditions when spraying as this may reduce the application rate. **Coverage** is approximately 6 to 8 square metres per litre.

SAFETY DIRECTIONS: Noble Earth Technologies 'Invisible Surface Guard' is NOT suitable for workshop type floors where oils, lubricants, hydrocarbons etc. come into contact with the floor on a regular basis.

FIRST AID: If poisoning occurs, contact a Poisons Information Centre (phone 13 11 26 form anywhere in Australia) or a doctor. If swallowed, do NOT induce vomiting. Give a glass of water. If in eyes, wash material from eyes with running water. If skin contact occurs, wash with water.
