

Noble Earth Technologies
Rust Encapsulator

CAUTION - POISON
KEEP OUT OF REACH OF CHILDREN
CONTAINS 30% WV WHITE SPIRITS

FLAMMABLE LIQUID

Noble Earth Technologies 'Rust Encapsulator' is an innovative formulation and when applied to a new metal surface will inhibit corrosion for up to 5 years. If applied to a rusty metal surface, it will pacify the existing rust and inhibit its further propagation.

Noble Earth Technologies 'Rust Encapsulator' leaves a hard wearing gloss finish on the metal which can be painted over with a suitable paint if desired. It can also be applied to masonry surfaces, such as the exposed sections on concrete slabs, to inhibit concrete caner.

DIRECTIONS FOR USE: Clean surface before application. Apply in light coats so that the product completely penetrates the surface, ensuring a lasting gloss finish. The 'Rust Encapsulator' can be applied using a roller, airless spray, pressure pot or simply applied with a cotton cloth. Allow 6 hours between coats and a minimum of 2 coats is recommended. For application where there is existing rust, clean area to remove any oils, grease, mill-scale loose flaking rust and paint, then apply the product over the entire area and rusty surface. The existing rust will turn black, which indicates that the rust has been pacified (overcoat if desired). Allow 48 hours before over-coating with enamel paint. Always test a section when over-coating with finishing paints to establish surface compatibility. Do NOT apply onto a damp surface.

Coverage is approximately 7 metres square per litre.

For further application details and technical information and uses please consult with the Noble Earth Technologies technical department.

FIRST AID: If poisoning occurs, contact a Poisons Information Centre (phone 13 11 26 from anywhere in Australia) or a doctor. If swallowed, do NOT induce vomiting. Give a glass of water. If in eyes, wash material from eyes with running water for at least 15 minutes and then consult a doctor. If on skin, wash with soapy water.
